# Purpose

According to the first telecommunications phase, we have provided DOMISEP a recommendation of the technologies and the equipments to roll-out in order to ensure the home automation connectivity.

Now the purpose of this project is to design and develop a web platform which will display the sensor data, meanwhile users can easily control over the objects (lights, automatic blinds, etc.) connected to the platform through their smart devices.

The website shall contain features including online registration, user profile management, exchanges between users and simple database manipulation. This report will introduce the specifications concerning diagrams of User Case, Activity and Database, as well as GUI mockups.

To get a better track of the project, we have designed a Gantt Chart to monitor the overall progress.

# Requirement & Scope

## Project Scope

DOMUS home automation system is a internet-based application that allows users to register and login the website, modify user profile, remotely control home sensors by room type, sensor type, and check data information at any time.

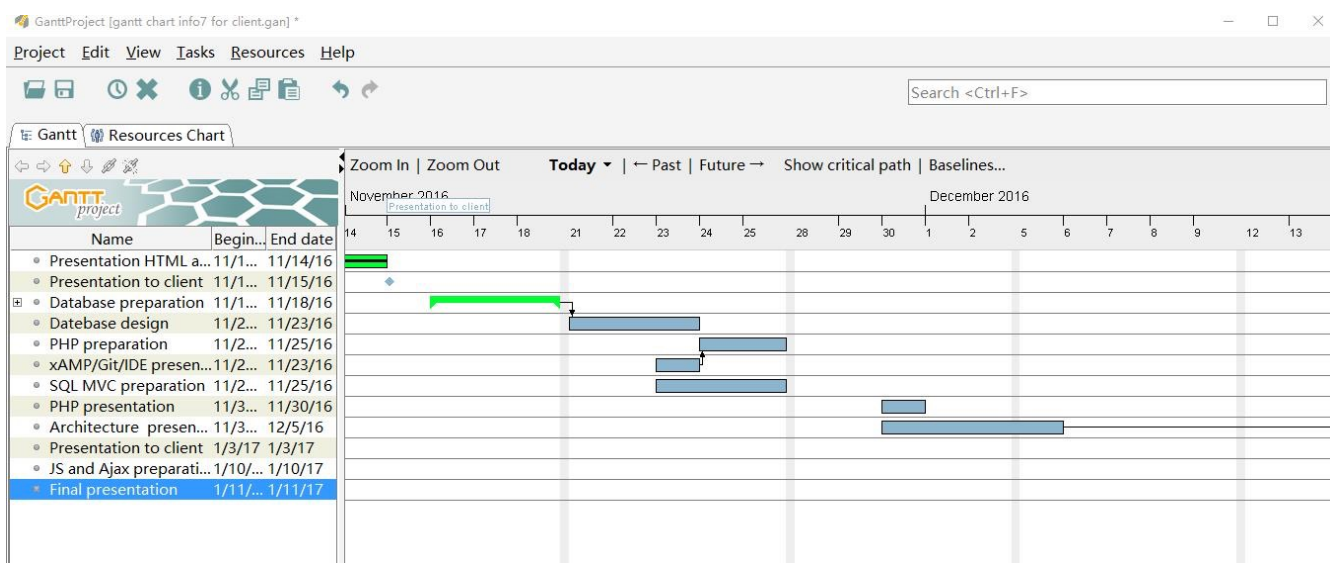

## Project Requirements

### Functional requirements

- login/signup response rate
- data processing/error handling
- GUI interface

### Non Functional requirements

- physical environment (computer, internet connection etc)

- 
- user & human factors

# SPEC-User Case

## Use Case Diagrams

A use case diagram at its simplest is a representation of a user's interaction with the system that shows the relationship between the user and the different use cases in which the user is involved. A use case diagram can identify the different types of users of a system and the different use cases and will often be accompanied by other types of diagrams as well.

In this project, the users of the system can be categorized as follows:

- Unregistered User
- Registered User
- Admin

Each of the above users has their own functionalities and the Use Case diagram can be as follows

## User Functionalities

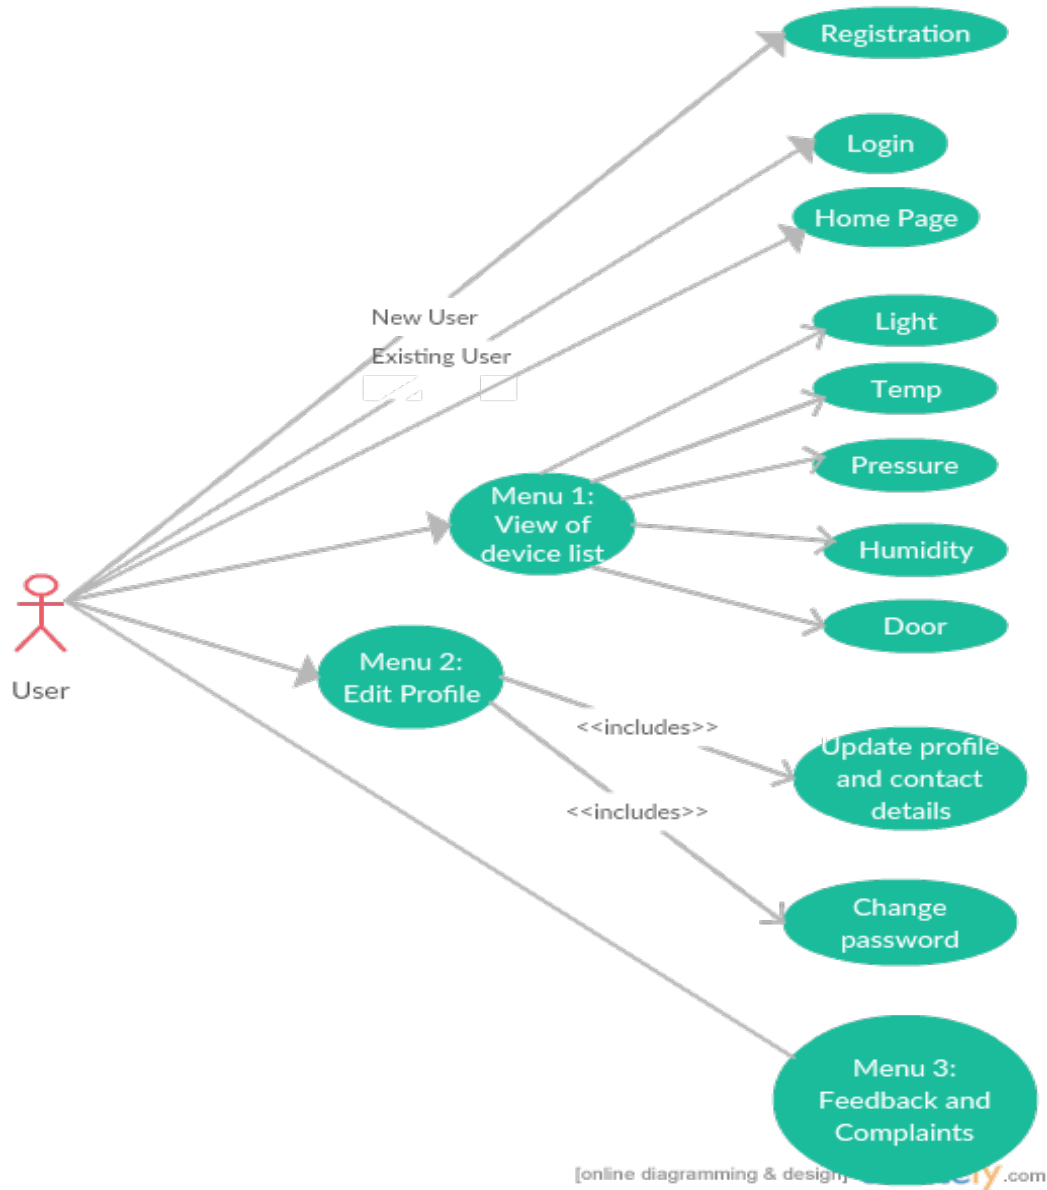

Registered User:

- A Registered User can login to the website
- User can access device view list and edit profile
- Can send feedbacks about the website and register his/her complaints
- Check the details rendered by the sensors through the display menu

Unregistered User:

- Can use the registration option and create a new account for accessing the account

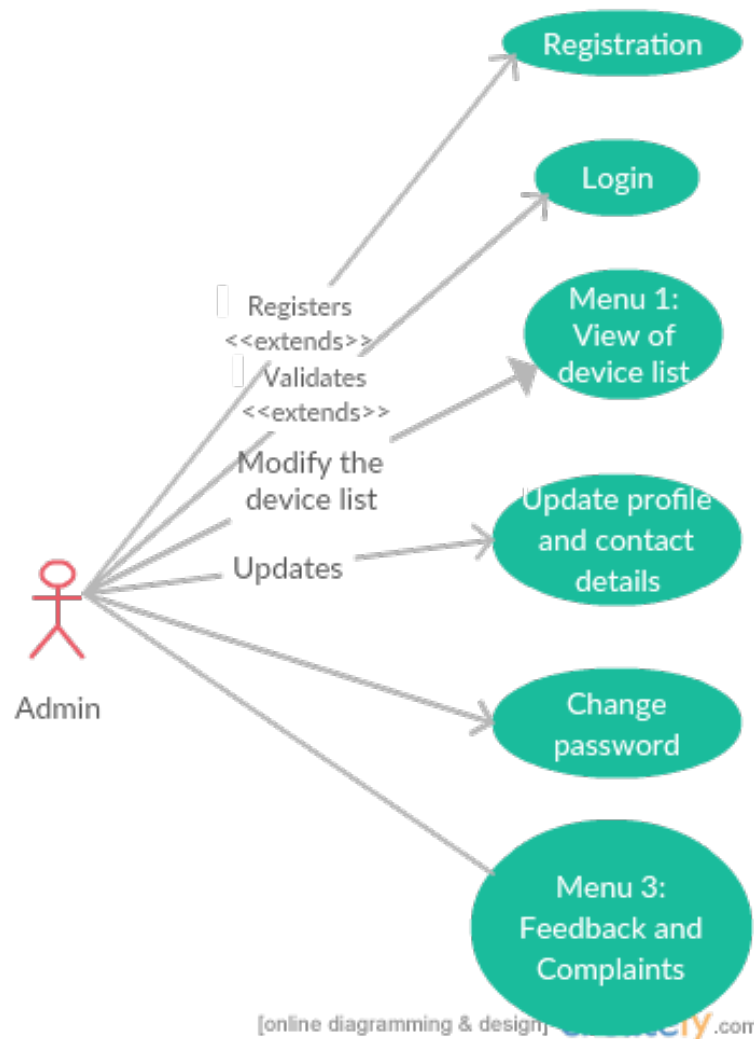

# SPEC-User Case

# SPEC-User Case

## Admin Functionalities

- An Administrator has basic control over all the actions done by the user
- Acts as a database and stores the user login details
- Adds the new user to the database
- Updates the sensors list if required

- Updates the user details incase of any update required

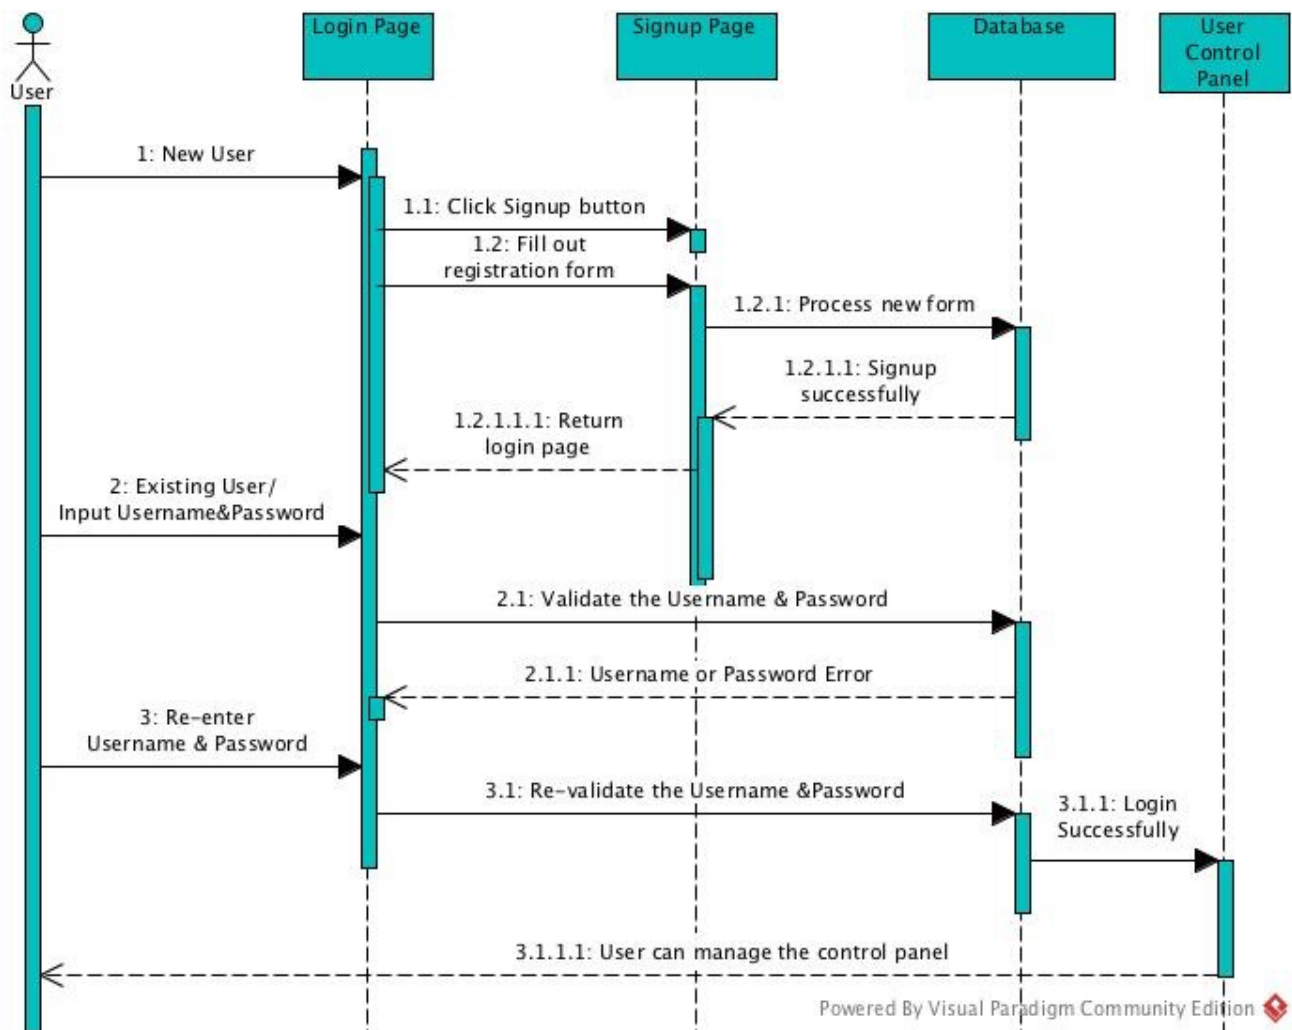

- Responds for the complaints registered by the users

# SPEC-Sequence Login

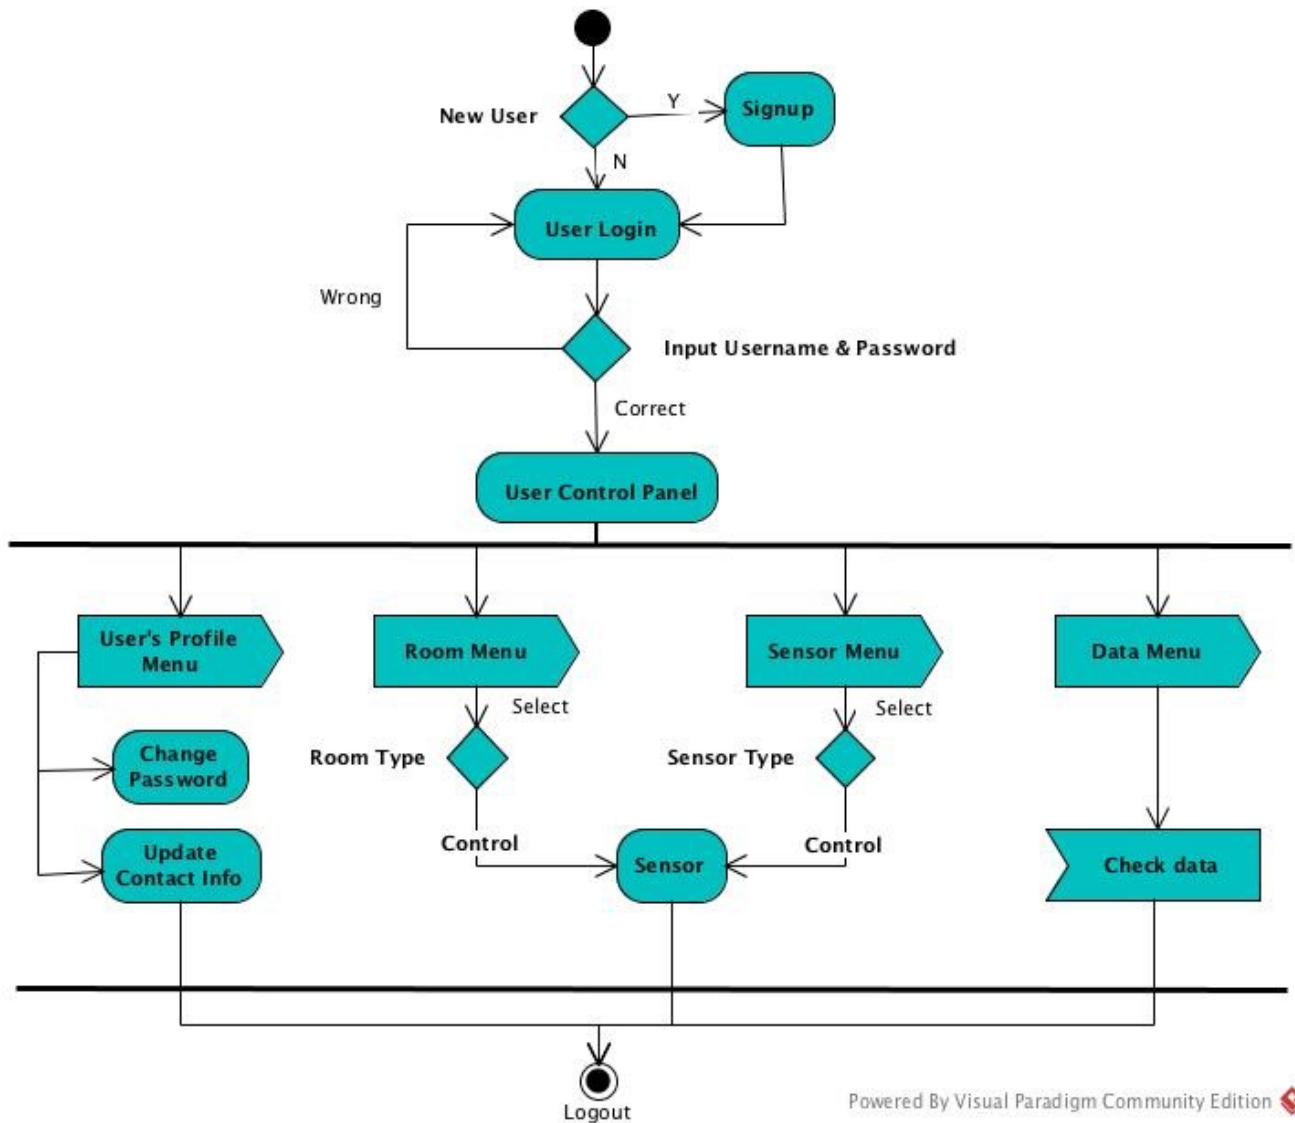

The following Sequence Diagram illustrates the user login process

- New user should start from the first 1 step for registration
- Existing user can directly login through the second 2 step

When login successfully, user can enter the control panel to manage the sensors

# SPEC-Activity

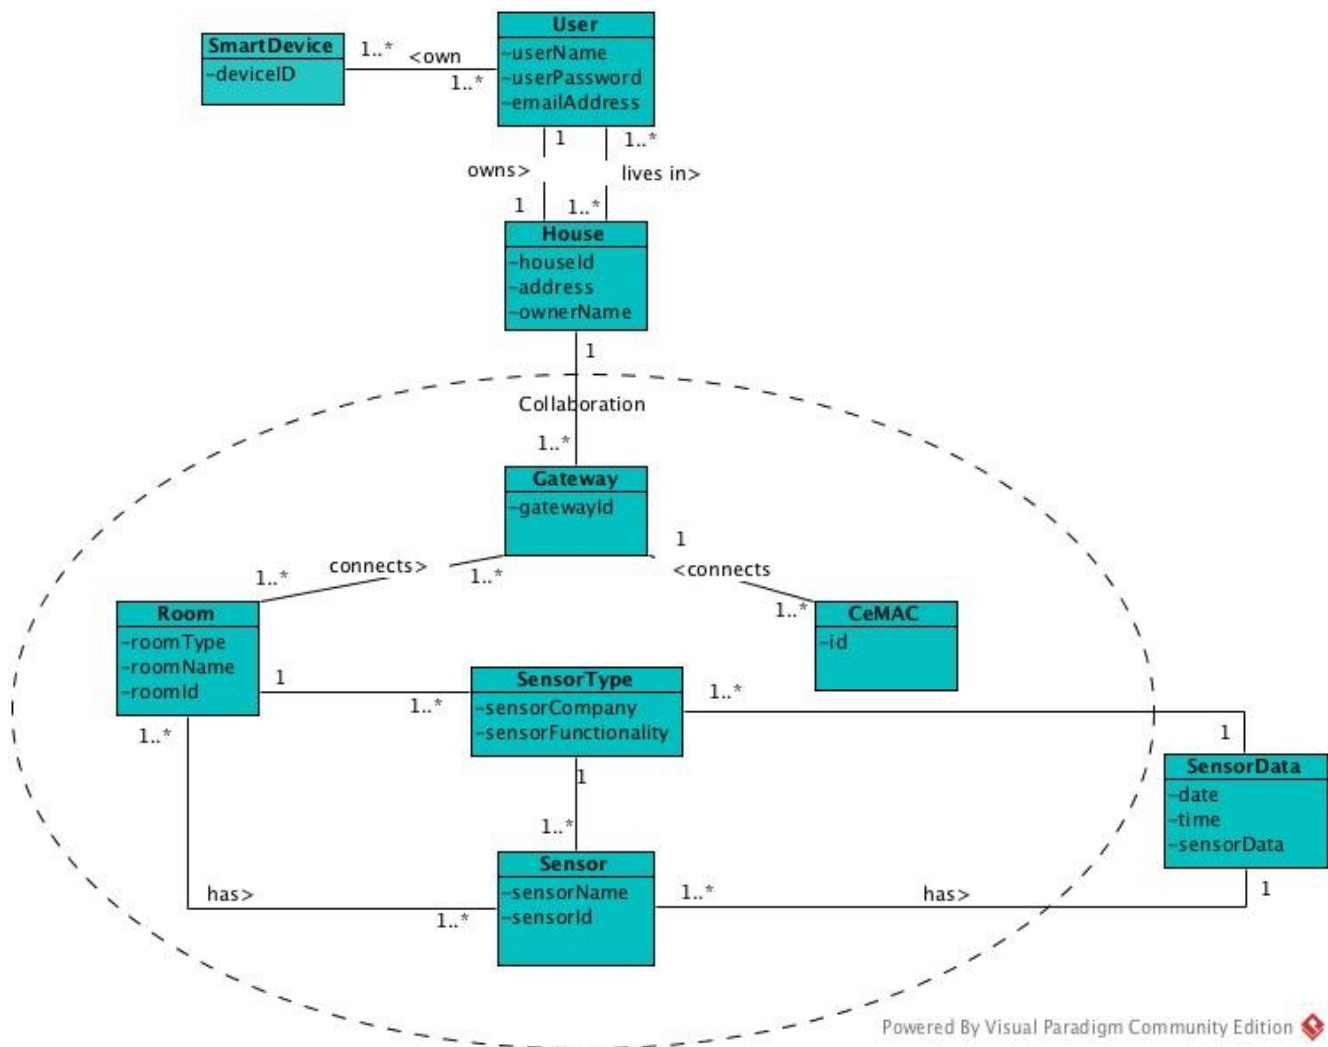

Powered By Visual Paradigm Community Edition

# SPEC-Database

Database UML Class diagram indicates

- Sensor data sheets – based on sensor types collecting multi-type of data
- Room data sheets – based on room types collecting sensors data in one particular room
- User-House relationship
- User-SmartDevices relationship considering security reasons
- CeMAC is treated as a movable robot embedded sensors

# SPEC-GUI

## DOMUS login page

- Existing User - click Log in button with Username and Password
- Fresh new User - click Sign up button for registration

A hand-drawn mockup of a web browser window titled "DOMUS". The address bar shows "http://www.domus.fr". The page content includes a teal house icon with "DOMUS" text below it, followed by the word "DOMUS" in large letters. There are input fields for "Username" and "Password". Below the password field is a checkbox labeled "Remember me" and a blue link "Forget password?". At the bottom right is a "Log in" button. Below a horizontal line, there is a "New User?" label and a "Sign Up" button. The browser window has navigation buttons (back, forward, stop, home) and a search icon.

DOMUS signup page

The image is a hand-drawn sketch of a web browser window displaying the DOMUS signup page. The browser's title bar is labeled 'DOMUS'. The address bar contains the URL 'http://www.domus.fr' and a search icon. The page content includes a teal house icon with the word 'DOMUS' below it, followed by the word 'DOMUS' in large blue letters. There are six input fields for 'First Name', 'Last Name', 'Email', 'Password', 'Mobile', and 'Home Address'. Below these fields is a line of text: 'By signing up, you agree to DOMUS's Terms of Use and Privacy Policy'. At the bottom is a 'Sign Up' button. The browser window has a grey border and a small double-slash icon in the bottom right corner.

# SPEC-GUI

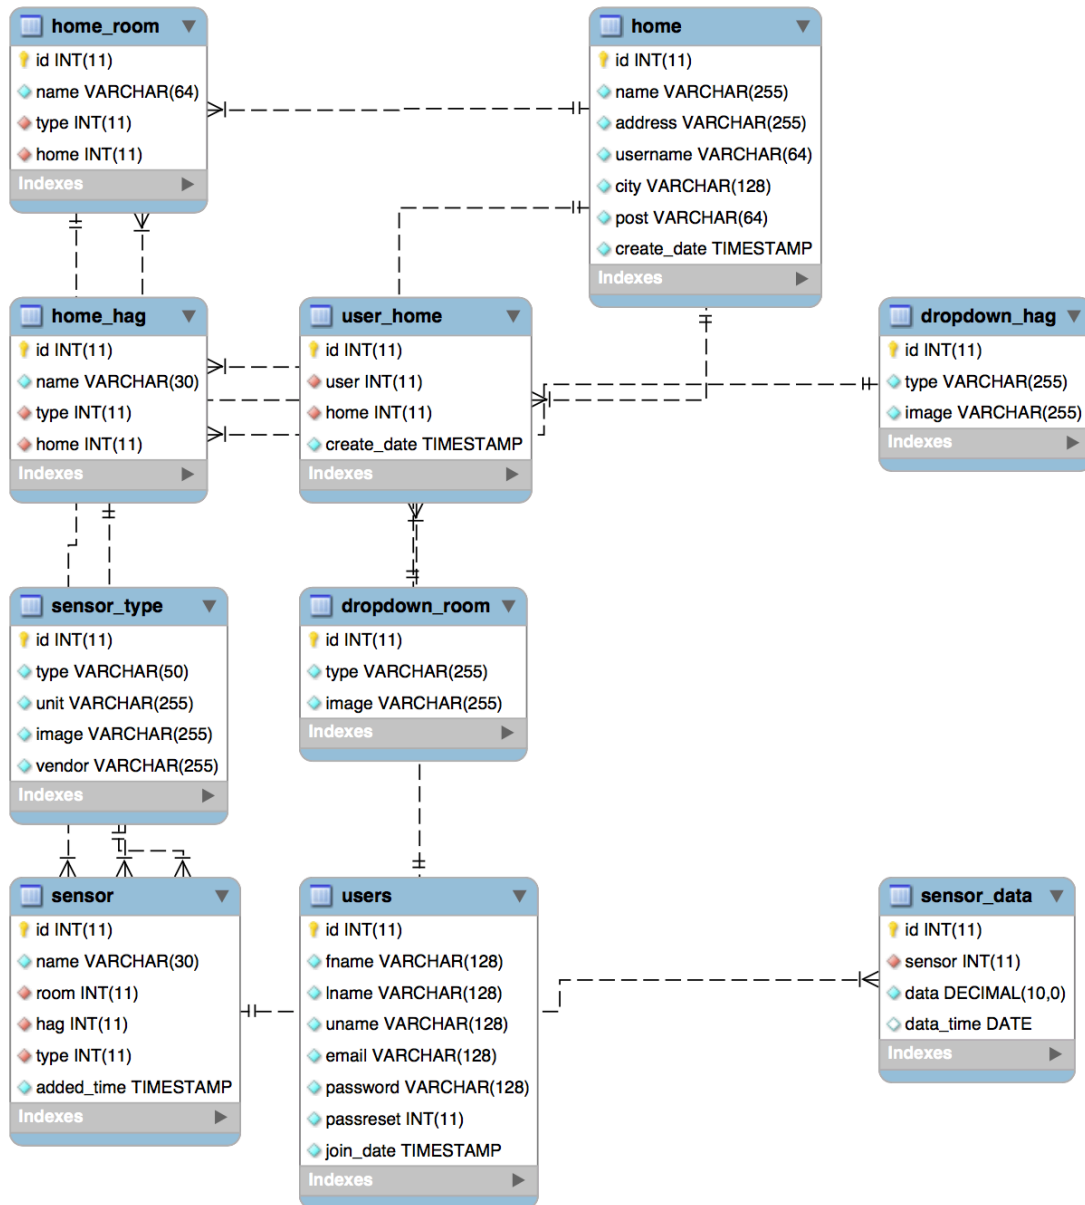

When users login successfully, they can do the below activities

- Modify the profile or logout
- Control the sensors by Room
- Control the sensors by Type
- Monitor the data

## Version 2.0

- updated database:

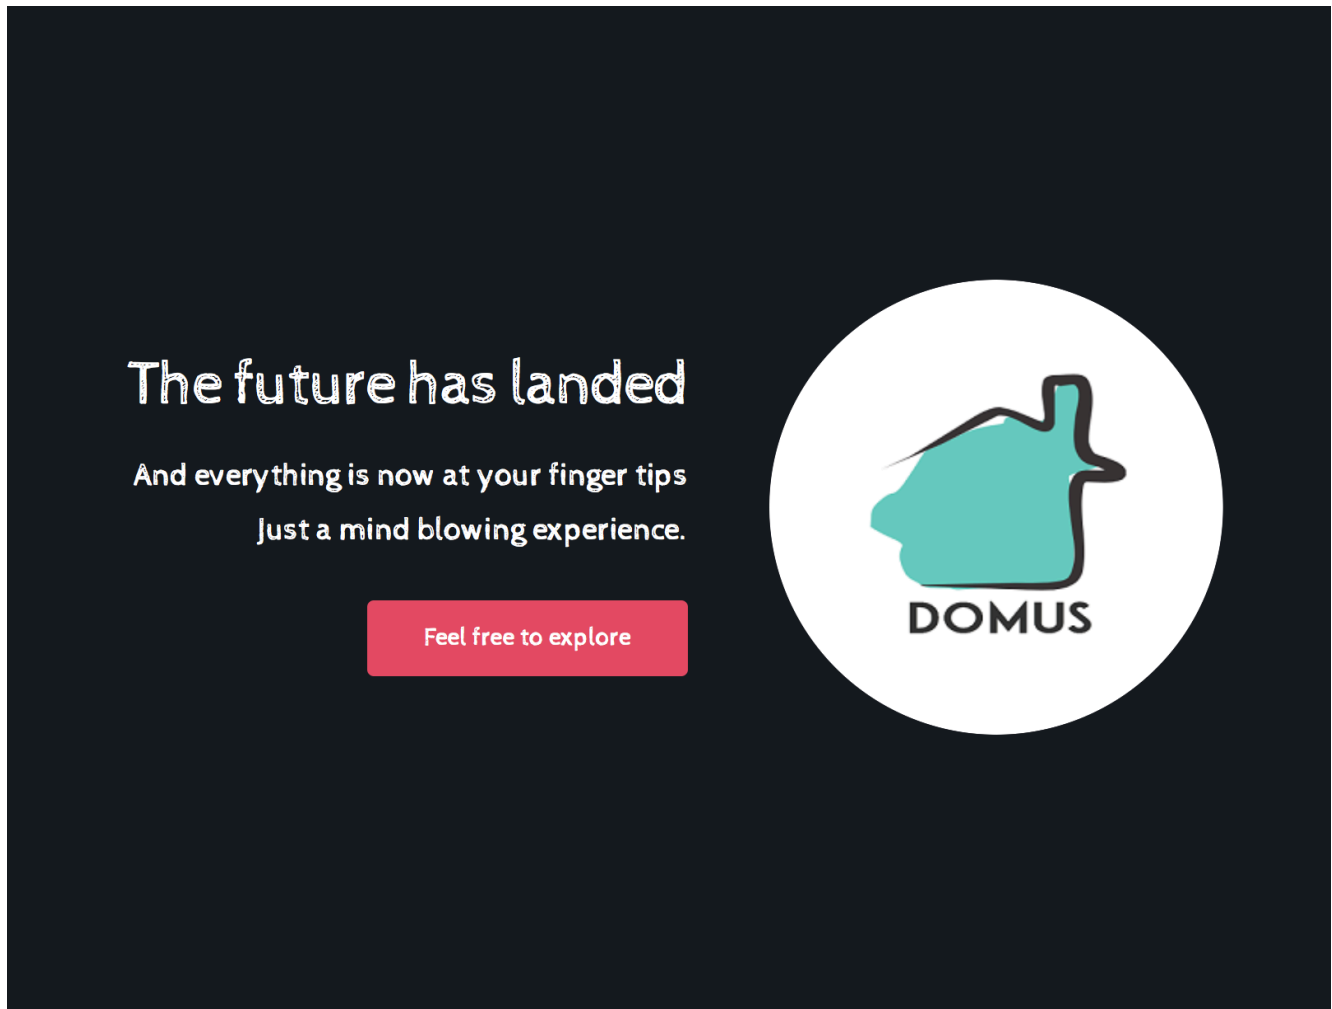

---

- updated GUI
